

De-risk complex projects: build and maintain the right project plan.

Our solution **arKitect WBS-builder™** is battlefield proven(*):

- **save costs** for building project plan and documentation by 20% to 50%
- **improve drastically** plan and documents **consistency** and **quality** for your proposal.
- **de-risk your projects** at all steps: proposal, faithful transfer from bid to project, monitoring

Application scope: bid proposal, project structure initialization, project documents baseline & generation, project cost assessment, impact analysis, breakthrough in project cost and delay by changing strategy and/or processes, adaptation to product maturity, collaborative project.

Make project plan documentation consistent and easy to understand and maintain:

- Define your project management plan through **ONE** synthetic view
- Formalize your product/service structure, including temporary items
- Rely on ISO 15288 to help structuring your processes when they are not formalized
- Build or update project WBS consistently from product or service definition
- Export your planned tasks into a planning software
- Generate automatically and consistently all your project plan documentation
- Update your project development plan in case of changes during your project
